

Sustainability: Product Recycled Content

1. Recycled content - % Pre-consumer Recycled content

Pre-consumer scrap is calculated from in plant scrap and by products that is re-melted

2. Recycled content - % Post-consumer Recycled content

Post-consumer scrap is calculated from purchased recycled scrap metal used as a raw material into the process

3. Total recycled content

The total recycled content is calculated as a percentage of metallic input

	Pre-consumer	Post-consumer	Total
Carbon Steel	6.0%	91.4%	97.3%
Duplex Stainless Steel	45.4%	15.2%	60.7%
Austenitic Stainless Steel	41.5%	31.6%	73.1%
Heat Resisting Austenitic	37.2%	13.6%	50.8%
Mo Austenitic Stainless Steel	64.9%	7.6%	72.5%
Utility Ferritic Stainless Steel	24.3%	54.9%	79.2%
Ferritic Stainless Steel	17.9%	51.4%	69.3%
Mo Ferritic Stainless Steel	28.3%	39.0%	67.3%
Stabilised Ferritic Stainless Steel	25.5%	46.0%	71.5%
Total Stainless Steel	22.9%	56.0%	78.8%
Total Production	28.7%	43.7%	72.4%

The percentages above are calculated from historical production data and may vary per product and over time.

Yours faithfully

Johan du Toit
